

PULSAR MULTIFUNCTIONAL THERMAL FUSION BINOCULAR

Model: PM-TFB-FUSION-X1 | Price: INR 14,55,000/-

The Pulsar Thermal Fusion Imager Binocular is a high-performance handheld electro-optical observation system designed for day and night surveillance, target detection, identification, reconnaissance and situational awareness. The system combines thermal imaging and visible-light imaging to provide enhanced observation across changing environmental and lighting conditions.

KEY SYSTEM CAPABILITIES & FEATURES

- Pulsar thermal and visible-light imaging technology
- Thermal + optical fusion imaging capability with real-time blending
- Day and night observation support across changing light levels
- High-resolution image display with crisp OLED ocular viewports
- Long-range detection, observation and reconnaissance capabilities
- Digital zoom and advanced image enhancement controls
- Compact, portable, ergonomic handheld binocular configuration
- Rugged field-ready construction for tactical and harsh environments
- High-capacity rechargeable battery operation for extended mission runtime
- Optimized for Defence, Border Surveillance, Security & Search/Rescue

OFFICIAL PRODUCT SPECIFICATION TABLE

Product Name	Pulsar Multifunctional Thermal Fusion Binocular
Product Category	Thermal Fusion Imager Binocular
Imaging Channels	Thermal Imaging + Visible-Light Optical
Operating Conditions	Day / Night / All-Weather Environment
Form Factor	Handheld Binocular Configuration
Zoom Mechanism	Digital Zoom & Image Enhancement
Power Source	Rechargeable High-Capacity Battery System
Construction	Compact / Rugged / Portable Tactical Housing
Primary Applications	Surveillance / Reconnaissance / Security / Search & Rescue
Standard Price	INR 14,55,000/- (Inclusive of standard field kit)
